U.S. Fish and Wildlife
Service

Installer:
Jean's Waterproofing, Inc.
Auburn, Maine

System:
EnviroLastic®

Area:
1,000 Sq. Ft.

Completed:
August, 1996

The Green Lake National Fish Hatchery in Ellsworth, Maine is an Atlantic Salmon breeding facility, operated by the U.S. Department of the Interior's Fish and Wildlife Division. This facility has some 120 concrete fish tanks which are beginning to show signs of deterioration.

Jean's Waterproofing was contacted to provide the operators with a solution as to what to do about this and to provide a demonstration using one of the tanks. EnviroLastic Rapid Cure Polyurea Lining System was chosen because of its quick turn around and its durable, flexible and resilient properties which allow it to expand and contract with the extreme differences in temperature encountered in that particular area between summer and winter.
